DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 26 and 31 of copending Application No. 09/700524. Although the conflicting claims are not identical, they are not patentably distinct from each other because:

Regarding claim 1, copending Application No. 09700524 (claims 26 and 31) includes the following limitations:

- synthesizing a speech signal corresponding to an unavailable packet (claim 26, lines 9-11).
- determining an overlap-add window to use in combining a portion of the synthesized speech signal with a subsequent speech signal resulting from a received packet being decoded by the receiver, wherein the size of the overlap-add window is

Art Unit: 2654

determined based on the duration of the unavailability of packets (claim 26, lines 25-27, "overlap adds a portion of the fifth memory with the start of the first non-erased decoded frame"; claim 31, lines 1-2, "length of the overlap added increases with the length of the missing frames");

- performing an overlap-add operation on the portion of the synthesized speech signal and such speech signal with use of the overlap-add window (claim 26, lines 25-27, "overlap adds a portion ...").

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented (although Application No. 09700524 has been allowed).

Claim Rejections - 35 USC § 103

The previous 35 USC §103 rejection of claim 1 is withdrawn. It is noted that Stenger ("A New Error Concealment Technique for Audio Transmission with Packet Loss," Proc. of European Signal Processing Conference, 1996) teaches performing an overlap add operation to fill a gap including a merging with a subsequent packet, but Stenger does not teach that the size of the overlap-add window of the synthesized speech with the subsequent packet is determined based on the duration of the unavailability of the packets.
